

WASHINGTON LATIN PUBLIC CHARTER SCHOOL

SUMMER 2021 UPPER SCHOOL COURSE OFFERINGS

COURSE DESCRIPTIONS

Please note that these are tentative course descriptions. It is possible that a course may be canceled due to low enrollment or other considerations.

- All Upper School courses are credit bearing and the grades earned will become part of a student's official transcript.
- US students may only be enrolled in ONE class at a time during any Session.
- Full credit courses (1.0), Duration: 5 Weeks (Session 1 **and** Session 2), the equivalent of the regular year-long offerings during the school year. For example, year long English or Math courses for Grade Recovery
- Half-credit courses (Electives) (0.5), Duration: 2.5 weeks (Session 1 **or** Session 2), the equivalent of a regular single-semester offering during the school year. For example DC History or Health.

ALGEBRA I & GEOMETRY (students who have not passed Algebra I or Geometry) – 5 weeks, In-Person

This course focuses on the study of the real number system, symbolic manipulation, and functions. Students in Algebra I begin the year with reinforcement of the use of operations with rational numbers. Once these concepts are solidified, students begin their study of algebra, starting with solving simple equations and moving to more difficult equations and inequalities. They study graphing in great detail, graph linear equations in multiple forms, and investigate the effect of the change in the slope and x- and y-intercepts on the graph. Students formalize their study of geometry through the development of the relationships in the plane and space developed intuitively in previous years. This course addresses specific content related to congruent segments and angles, circle chords, parallel and perpendicular lines, angle measures in triangles, direct and indirect triangle congruence and similarity, solids of revolution, the Pythagorean Theorem, coordinate geometry, and surface area and volume of solids.

ENGLISH 9/10 (students who have not passed English 9/10) – 5 weeks, In-Person

This course is tailored to reading and writing as the students are below grade level in comprehension, grammar, syntax, and vocabulary. Students will read a main text as well as other short pieces which may accompany this text. Writing assignments follow the reading and discussion of the language and meaning of the text. The students go through a writing process: gathering ideas, writing a rough draft, revising their draft, writing a final copy. As they work through the writing process, they also work on advancing their grammar skills, syntax, and vocabulary.

ENGLISH 11/12 (students who have not passed English 11/12) – 5 weeks, In-Person

This course stresses the basics of English: reading, writing, vocabulary, and grammar. Students read in all genres, using the tools and nomenclature of literary analysis. Regular quizzes, reading aloud, instruction and practice with annotation, and close attention to the ways literature works instruct the student in how to read a text carefully and with feeling. The course also emphasizes class discussion and the importance of reader response, especially around the theme of the ways that race, culture, friends, and family shape personal identity. Formal writing assignments receive written comments and suggestions from the teacher, who frequently gives students the option to revise. In-class writing exercises reinforce those skills taught by longer assignments. Student writing instruction and feedback focuses on sentence-level clarity and paragraph structure -- a strong and insightful main idea sentence, supported by body sentences that provide evidence and explanation. Students work to master the use and MLA-style formatting of citations, quotations, and Works Cited pages to support their arguments and insights. Grammar instruction includes diagramming sentences with the following concepts: subject, predicate, direct object, predicate nominative, predicate adjective, indirect object, prepositional phrase. Students develop a working knowledge of the following parts of

speech: noun, verb (action and linking), adjective, adverb, article, preposition. Students will read a main text as well as other short pieces which may accompany this text.

ART I – Session 2 only, Hybrid (Waitlist)

As a foundational course, the assignments in Drawing and Design will first focus on realism with an emphasis on learning to see with a more critical eye and on discovering individual interests. In the second half of the course, students will turn their attention to color and painting. The focus will be on color theory, color mixing, value in color, painting skills, and how materials affect the image. As we move from skill building to painting and pastel drawing as a creative process, students will begin to explore their ideas as they make increasingly more of the decisions regarding the size, materials, techniques and styles of their work. Students will also make introductory explorations into abstraction. Curiosity and willingness to take risks will be encouraged as students build their skills with both wet and dry media and as they learn to navigate the creative process.

DC HISTORY – Both Sessions, Hybrid (Waitlist for Session 1)

In this course, we will explore the magnificent city of Washington, DC. Our journey begins with the land, its people and the creation of the nation's Capital. We will discuss provocative issues affecting all citizens who live, work and play in DC. Topics such as class, race, geography, politics, education, sports, voting, gentrification, and community will be discussed. In addition, students will be expected to speak and write about their family history, neighborhoods, and their favorite part of the city. Students will also be asked to speak and write about things they want to change in DC. Most importantly, we will travel and explore the city, host guest speakers, and debate issues that are important to us.

GOVERNMENT – Session 2 only, Hybrid (Waitlist)

An informed citizen is an educated citizen. In the United States, over half of the population does not know its own history or how its government works. They do not know their rights as Americans. They do not know how their country operates, nor do they understand the legacy and history of their country. This course will give you the knowledge and skills to not only understand government, but to think about and to analyze government with a critical eye. The skills we practice and learn in this class will serve you well in your thinking about current events and your world today. You will become citizens who know their rights, responsibilities, and privileges as Americans and more importantly, the legacy that you have inherited from the entire western world. You will join the ranks of the most informed people in America. By the end of this course, all scholars will be able to *identify, analyze, explain, summarize and categorize their rights and responsibilities as citizens of the United States, understand the role of government in their lives, how American government came to be and interpret key concepts of political science.* Texts: *Magruder's American Government, We the People: The Citizen and the Constitution, Democracy in America, The Declaration of Independence, The United States Constitution, The Federalist Papers,* and excerpts from various Supreme Court decisions.

HEALTH – Both Sessions, Hybrid (Waitlist for Session 1)

This course is designed to promote the physical, mental, and social well being of the individual. Areas of study include structure and function of body systems, physical fitness, communicable and noncommunicable diseases, nutrition, environmental health, mental health, stress, first aid, sexual education, alcohol and tobacco, and other drugs. Students

are also given opportunities to explore their own feelings and values with an emphasis on making responsible, healthy choices now and in the future.

MUSIC – Session 2 only, In-Person

In order to get a more comprehensive understanding of music on the whole, the class of General Music takes two different approaches: theoretical and historical. The theory portion of the class is designed to give the student a foundation in how to read, write and perform music. Students are given the opportunity to perform rhythm compositions from pop culture and their own original rhythm compositions. Students are also given a better understanding on how music is melodically structured, learning specifically about major and minor scales in addition to interval qualities and quantities. Students are also required to do listening exercises in order to become more familiarized with music terminology and in order to better appreciate live music. Upon completion of the first quarter, we shift gears and students are introduced to medieval music and the invention of written music. Students learn a general overview of the musical periods in which they are most interested. In efforts to show understanding of the time periods, students compose their own pieces of music using music software on the computer. General Music is taught using a collection of readings from an assortment of books and articles.

SUMMER BRIDGE – Session 1 only, In-Person

New-to-Latin, incoming ninth graders are *strongly encouraged* to attend this wonderful program to welcome them to Washington Latin. Students will learn about our school culture and common instructional practices here, including the Socratic Seminar, research methods, and public speaking. They will also get an introduction to the Latin language. Each Friday, they will earn community service hours towards their graduation requirement. This program gives new ninth-grade students an opportunity to familiarize themselves with our building and many of the teachers they will see next year.

FORENSIC SCIENCE – Session 2 only, In-Person

Students must have completed Physics in order to take Forensic Science.

This course covers key topics in forensic science, including extensive laboratory experience that integrate the concepts learned in biology, chemistry and physics to strengthen individual skills in scientific reasoning and observation. Students will use the application of the scientific process to forensic analysis, procedures and principles of crime scene investigation, physical and trace evidence, and legal and courtroom procedures from the perspective of a forensic scientist. Through lessons, lab activities, and analysis and creation of fictional crime scenes, students will learn basic scientific and mathematical methods and models required in forensic science.
