

Math 6 Summer Math Packet

Summer 2021

Welcome to 6th Grade Math! This year, we will continue the work of becoming mathematicians. Mathematicians look for patterns, persevere in solving difficult problems, construct reasonable arguments, and work together. To do these things, we need some tools. This packet will help you review what you learned in 5th Grade and sharpen your tools to be prepared for 6th Grade Math.

I recommend completing a section or two each week so that you spread the work out over the summer. You can check your answers in Edulastic as you go.

[Click on this link to access your Summer Math Packet.](#) This packet will be due the first week of school.

Email me at lmoores@latinpcs.org if you have any questions or issues logging into Edulastic.

I cannot wait to explore math with you all next year!

Take care,
Ms. Moore
